Before you can build a view and analyze your data, first connect the data to IBM Cognos. Cognos supports connecting to a wide variety of data, stored in a variety of places. The data might be stored on your computer in a spreadsheet or a text file. In our case, we will be using a spreadsheet or text file for making our analysis.

The screenshot shows a web browser window with a tab titled 'Sales Prediction and Reporting'. The address bar shows the URL '127.0.0.1:8000/sales/details/1/'. The page displays a table titled 'SALES DETAILS' with the following data:
